## Welcome to the November 2017 Newsletter!

GDS

### **Reminder: BSPlink Credentials**

BSPlink users are reminded not to share their passwords. Sharing account credentials can put organizational security at risk by exposing customer information and financial data to unauthorized users. Also, use strong passwords, and remember they need to be unique in every system and changed on a regular basis. Lastly, please remember that you can use the "**Forgotten Password?**" Link in the BSPlink home page to reset and reinforce your credentials.

### **November Developments**

#### **NGISS - New Location Type/Host Location Type additions**

As a part of the NGISS Project, the agent master file and BSPlink form for registering new agents will be adapted to accept new values for the Location Type/Host Location Type regardless of the agent's class or environment type. The new values are:

- HE (Head Entity): being the result of merging HO (Head Office) and AO (Administrative Office) types
- AE (Associate Entity): being the result of merging BR (Branch Office) and SA (Specific Sales Activity) types. The corresponding queries containing agent's data will be modified to display these new values.

#### **Weblink FPTP field change for airlines**

The Weblink process will be modified for the files sent by LATAM Airlines where transactions with FPTP=MSCA will change to IT08.FPTP="CCGR" in the RET files (output) & TCN format files, in order to identify Weblink sales to Government entities in BSP BR.

### **Future Developments**

#### **Weblink process change in current validations**

The control over the alpha-numeric fields will be modified within the Weblink process, for all DISH versions and TCN format in the current WEblink and NDClink files. This will permit the following characters to be reported in the RET files: Full stop/period [.] , Slash [/] , Minus Sign [-] , Embedded blank (space) , Opening Parenthesis [(] , Closing Parenthesis [)] , Asterisk [\*] , Dollar Sign [\$] and Backslash [\\].
